Beliefs about COVID-19 Facts and Myths (2)

Mosquitos are a source for transmitting COVID-19 virus infection.

Until now, it has not been proven that mosquitos can transmit it to humans.

COVID-19 virus infection can be transmitted from mother to fetus.

Current researches have not proven that it can be transmitted from pregnant mother to fetus or from lactating mother to infant.

The way of wearing a face mask by a COVID-19 virus infected person is different from that of a healthy person.

The way of wearing a face mask is unified. The white side is worn inwards. The blue/green side is worn outwards.
