Safety Alert
Patient Falls QIS e -Trigger

Quality Management Department is pleased to announce a new feature to improve the capture of patient fall events and enhance reporting in the Quality Information System (QIS):
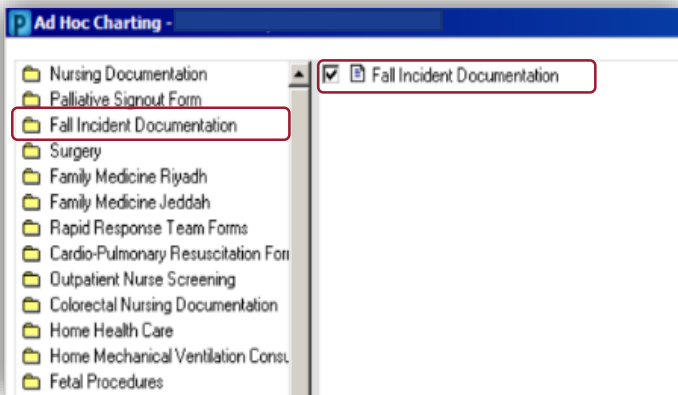

Fall QIS e-Trigger

GO LIVE DATE: 1st JUNE 2020

Patient with an active encounter:
The healthcare provider needs to select the "Fall Incident Documentation" from the Ad-Hoc charting in the Powerchart and document all the details of the falls event, including the post fall interventions.

NO NEED to report a Safety Incident in the QIS for the fall event; a safety incident record will be generated automatically from the Powerchart to the QIS, upon signing the Ad-Hoc form in the patient's medical record.

Patient with a non-active encounter (Visitor/Escort):
The fall event shall be reported through the QIS by filling up the required fields with the details of the fall incident.

The Quality Aims Team *"Zero Fall with Injury or Death"* requests your support to help the Organization in eliminating injuries from fall by ensuring that:

- All safety measures have been considered.
- The patients and their families are instructed about fall risks and precautionary measures.
- The healthcare providers communicate all fall risks and ensure a timely report of any harmful event.

Note: For more details, kindly refer to the attached ICIS NEWSLETTER
