*Process For High-Risk Exposure Staff With No Signs Or Symptoms Returning To Work

- Employee presents to their working area and goes to a designated POCT negative pressure room or to a designated room with Hepa filter.
- POCT rapid COVID antigen will be done with full PPE by trained SN1 or Care Assistant.
- Employee will wait for 15 minutes until the result becomes available.
- The result has to be entered manually into ICIS iView and I & O POCT band (POC Rapid Antigen COVID-19 test).
